ABHINAV ARUN RASKAR

Pune, India | +91-8830640629 | abhinavraskar2@gmail.com | LinkedIn | GitHub

Professional Summary

Full Stack Developer with experience building and deploying MERN applications and AI-powered SaaS products. Skilled in JavaScript, React.js, Node.js, Express.js, MongoDB, RESTful APIs, JWT authentication, and Generative AI/LLM API integration. Experienced in developing production-ready applications with payment integration and cloud deployment.

Education

Savitribai Phule Pune University Nov 2022 – Jun 2026
Bachelor of Engineering, Computer Engineering
CGPA: 8.14 / 10.00

Experience

MERN Stack Intern — Bitmap Technology (Remote) Jan 2026 – Apr 2026

- Built 7+ reusable React components adopted across multiple product modules, reducing UI code duplication.
- Integrated the frontend with backend REST API endpoints, improving client-server integration for new features.
- Diagnosed and resolved responsive UI issues across browsers and screen sizes, improving cross-device compatibility.

Web Development Intern — Veracity (Remote) Jan 2025 – Feb 2025

- Improved page load performance using lazy loading, code splitting, and image optimization.
- Built responsive UI components tested across multiple browsers and devices for cross-device compatibility.
- Resolved production bugs, improving application stability and reducing user-facing errors.

Projects

InvoiceGenius – AI Invoice Management SaaS GitHub | Live
React.js, Node.js, Express.js, MongoDB, Razorpay, Clerk, GROQ API

- Engineered a user-based invoice platform supporting invoice creation, payment tracking, and PDF export; successfully deployed and live.
- Structured the backend with controllers and compound MongoDB indexes (`owner + invoiceNumber`, `owner + createdAt`), enforcing user-based data isolation and optimizing invoice-listing query performance.
- Built centralized error-handling middleware with inline request validation to reduce invalid-request errors.
- Achieved a 91/100 Lighthouse Performance score on the deployed frontend, with a sub-1-second First Contentful Paint (FCP).

AI Mock Interview Platform GitHub | Live
React.js, Node.js, Express.js, MongoDB, JWT, Google Gemini API, AssemblyAI, Murf AI

- Built a full-stack AI interview simulator generating role- and difficulty-specific technical questions via the Google Gemini API, with an integrated Monaco code editor for live coding rounds.
- Implemented end-to-end voice interviews using AssemblyAI for speech-to-text transcription and Murf AI for text-to-speech, enabling hands-free spoken Q&A sessions.
- Engineered resume upload and parsing (PDF text extraction via pdfjs-dist) to tailor interview questions to the candidate's actual background.
- Secured the platform with JWT-based authentication and bcrypt password hashing, alongside protected REST APIs for interviews, resumes, and history.
- Designed a persistent interview history and scoring system in MongoDB, giving users AI-generated feedback and performance tracking across sessions.

Technical Skills

Languages: JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend: React.js, React Router, Responsive Web Design, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Middleware, MVC Architecture, Error Handling
Databases: MongoDB, MySQL
AI / GenAI: Generative AI, LLMs, Prompt Engineering, AI API Integration, Google Gemini, AssemblyAI, Murf AI
Tools & Deployment: Git, GitHub, Postman, Docker, Render, Vercel
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Backend Concepts: API Design, Webhooks, Rate Limiting, Idempotency, Authentication & Authorization

Achievements

- Earned an **NPTEL Elite Certification in DBMS** with a score of **77%**, ranking among the **Top 5%** of certified candidates.
- Built and deployed **2 AI-powered SaaS applications** using MERN, integrating LLM APIs, authentication.
